

Professional glass restoration for hotels and resorts

Recover clarity and visual consistency in guest-facing areas while reducing replacement, disruption and downtime.

+18 years

specialized experience

Nationwide

service in Mexico

On site

without dismantling when feasible

Up to 70%

potential savings vs. replacement

Restore the glass. Recover its clarity. Preserve your investment.

Guest-facing glass

Appearance is part of the hospitality experience

Hard-water scale

Persistent mineral haze on shower enclosures, railings, spa and pool glass.

Scratches

Visible lines on lobbies, guestrooms, restaurants, doors and partitions.

Iridescence

Rainbow-like optical effects that make glass look stained even after cleaning.

Acid graffiti

Chemical etching on exposed façades and storefront-like areas.

Operational wear

Glass may remain structurally intact while losing the visual standard expected by guests.

Replacement impact

Fabrication and dismantling can affect occupancy, access, finishes and operating schedules.

Priority areas

Where restoration creates the most value

Guestrooms

Shower enclosures, partitions, mirrors and windows.

Lobby and entrances

High-visibility glass where scratches and haze are immediately noticeable.

Restaurants and bars

Partitions, doors and decorative glass requiring consistent presentation.

Spa and pool

Mineral deposits and humidity-related contamination.

Railings

Glass exposed to water and exterior conditions.

Façades

Installed glass where replacement creates access and logistics challenges.

Benefits

Designed for an operating property

Lower disruption

Coordinate interventions by area and low-occupancy windows.

Preserve installed assets

Avoid dismantling whenever restoration is technically viable.

Visual consistency

Recover clarity and improve perceived cleanliness.

Cost control

Compare restoration with fabrication, transport, access and installation of new glass.

Faster recovery

Reduce replacement lead times in applicable cases.

Sustainability

Preserve existing materials and reduce waste.

Departments we support

A solution coordinated with hotel operations

General Management

Protect brand presentation and guest experience.

Maintenance / Engineering

Diagnose recurring mineral damage and coordinate access.

Housekeeping

Resolve haze that standard cleaning no longer removes.

Operations

Schedule work with minimal interference to service.

Purchasing

Evaluate full lifecycle cost before approving replacement.

Property Administration

Support maintenance plans and asset preservation.

Technical process

Controlled on-site restoration

1. Diagnosis

Confirm damage type, glass condition and representative test area.

2. Protection

Protect fixtures, stone, metal, seals and nearby finishes.

3. Restoration

Correct the affected layer according to the technical method.

4. Optical review

Verify clarity, reflections and uniformity under representative conditions.

Technical scope

What we evaluate

Intact glass

Not applicable to cracked or fractured panes.

Hard-water scale

Mineral contamination is distinguished from permanent surface alteration.

Iridescence

Requires diagnosis because several mechanisms can produce similar rainbow effects.

Scratches

Depth, location and edge distance determine feasibility.

Access

Work areas and schedules are coordinated with property operations.

Dry restoration

The process is controlled and performed without dismantling the pane when feasible.

Experience

Hospitality references within a broader national track record

+18 years

Specialized glass restoration experience in Mexico.

National coverage

Service coordination across Mexico.

Documented cases

Corporate case library with 120 documented interventions across 17 states.

Hospitality exposure

Experience associated with luxury and international hotel environments, presented on a reference basis where applicable.

Next step

Evaluate restoration before authorizing replacement

Share the issue

Area, damage type, approximate quantity and operating restrictions.

Technical review

We define feasibility, work sequence and access requirements.
